\*\* Global Attributes: class | contenteditable | contextmenu | dir | draggable | id | irrelevant | lang | ref | registrationmark | tabindex | template | title

## **HTML 5 - extended**

Tag	Info	Attributes
	<b>comment</b> : comments are displayed in code only. Tag contents are not rendered in the browser	none
	<b>document type</b> : defines which specification the document follows	none
<a></a>	anchor: used to provide a link to another web resource	href: destination resource of the hyperlink hreflang: gives the language of the linked resource media: describes for which media the target document was designed ping: gives the URLs of the resources that are interested in being notified if the user follows the hyperlink ref: relationship between the document containing the hyperlink and the destination resource [alternate   archives   author   bookmark   contact   external   feed   first   help   icon   index   last   license   next   nofollow   noreferrer   pingback   prefetch   prev   search   stylesheet   sidebar   tag   up] target: gives the name of the browsing context that will be used [_blank   _parent   _self   _top] type: gives the MIME type of the linked resource
<abbr></abbr>	<b>abbreviation</b> : an abbreviation or acronym, optionally with its expansion	global attributes**
<address></address>	address element: represents the contact information for its nearest article or body element ancestor	global attributes**
<area/>	area: either a hyperlink with some text and a corresponding area on an image map, or a dead area on an image map	alt: alternate text for the area cords: coordinates for the clickable area href: destination resource of the hyperlink hreflang: gives the language of the linked resource media: describes for which media the target document was designed ping: gives the URLs of the resources that are interested in being notified if the user follows the hyperlink rel: relationship between the document containing the hyperlink and the destination resource [alternate   archives   author   bookmark   contact   external   feed   first   help   icon   index   last   license   next   nofollow   noreferrer   pingback   prefetch   prev   search   stylesheet   sidebar   tag   up   shape: defines the shape of the area [default   rect   rectangle   circ   circl   poly   polygon   target: gives the name of the browsing context that will be used [_blank   _parent   _self   _top)   type: gives the MIME type of the linked resource
<article></article>	article element: a section of a page that consists of a composition that forms an independent part of a docu- ment, page, or site	global attributes**
<aside></aside>	aside element: a section of a page that consists of content that is tangentially related to the content around the aside element, and which could be considered separate from that content	global attributes**
<audio></audio>	sound content: represents a sound or audio stream	autobuffer: determines if the audio will be buffered [autobuffer] autoplay: determine if the audio will automatically play [autoplay] controls: indicates that the author has not provided a scripted controller and would like the user agent to provide its own set of controls [controls] loop: sets whether the audio will start once the end is reached [[oop] src: URL of the audio to play
<b></b>	<b>bold text</b> : creates text that will be made bold	global attributes**
<base/>	base element: base URL for all the page links	href: URL to use as the base URL for links in the page target: sets the base target for links in the page [_blank   _parent   _self   _top]
<bb></bb>	<b>browser button</b> : a user agent command that the user can invoke	<b>type</b> : indicates the kind of command [makeapp]
<bd><bd>&gt;</bd></bd>	<b>bdo element</b> : represents explicit text directionality formatting control for its children	dir: direction override [/tr   rt/]
   	block quote element: a section that is quoted from another source	cite: URL of the origin of the quote
<body></body>	<b>body element</b> : main content of the document	global attributes**
 	<b>break</b> : inserts a single line break	global attributes**

Tag	Info	Attributes
<button></button>	button: a button page element	autofocus: indicate that a control is to be focused
Courtons	<b>button</b> : a button page element	disabled: prevents the button from being pressed [disabled: prevents the button from being pressed [disabled]  form: used to explicitly associate the button element with its form owner formaction: URL that specifies a form processing agent formentor: URL that specifies a form processing agent formentorye: specifies the content type used to submit the form to the server [application/x-www-form-urlencoded   multipart/form-data   text/plain  formmethod: which HTTP method will be used to submit the forms data [get   post   put   delete] formnovalidate: indicate whether the form is to be validated during submission [formnovalidate] formtarget: gives the target when the form is submitted [_blank   _parent   _self   _top  name: elements name type: controls the behavior of the button when it is activated [submit   reset   button  value: gives the element's value for the purposes of form submission
<canvas></canvas>	canvas element: a resolution- dependent bitmap canvas, which can be used for rendering graphs, game graphics, or other visual images on the fly	height: height of the canvas in pixels - default is 150 width: width of the canvas in pixels - default is 300
<caption></caption>	<b>table caption</b> : the title of the table that is its parent, if it has a parent and that is a table element.	global attributes**
<cite></cite>	<b>citation</b> : represents the title of a work	global attributes**
<code></code>	computer code text: represents a fragment of computer code. This could be an XML element name, a filename, a computer program, or any other string that a computer would recognize.	global attributes**
<col/>	<b>column</b> : defines the attribute values for one or more columns in a table. Used inside of a table or colgroup	span: number of columns the tag should span
<colgroup></colgroup>	column group: a group of one or more columns in the table that is its parent, if it has a parent and that is a table ele- ment	span: number of columns the tag should span
<command/>	command button: a command that the user can invoke (like radio button or checkbox)	type: Specifies the type of command [checkbox   command   radio] label: gives the name of the command, as shown to the user icon: a URL to a picture that represents the command disabled: prevents the command from being executed [disabled] checked: Determines if the command is checked by default [checked] radiogroup: gives the name of the group of commands that will be toggled when the command itself is toggled title: gives a hint describing the command, which might be shown to the user to help them
<datagrid></datagrid>	datagrid element: an interactive representation of tree, list,	disabled: defines whether the list is selectable [disabled]
<datalist></datalist>	<b>dropdown list</b> : a set of option elements that represent predefined options for other controls	global attributes**
<dd>&gt;</dd>	definition description: description, definition, or value, part of a term-description group in a description list (dl element), and the discourse, or quote, part in a conversation (dialog element)	global attributes**
<del></del>	<b>deleted text</b> : represents a removal from the document	cite: a URL used to specify the address of a docu- ment that explains the change datetime: used to specify the time and date of the change
<details></details>	details element: represents additional information or controls which the user can obtain on demand	<b>open</b> : indicates whether the details are to be shown to the user [open]
<dialog></dialog>	dialog element: represents a conversation, meeting minutes, a chat transcript, a dialog in a screenplay, an instant message log, or some other construct in which different players take turns	global attributes**
<div></div>	<b>document block</b> : creates a block level element with no special meaning	global attributes**

## **HTML 5 - extended**

Tag	Info	Attributes
<dfn></dfn>	definition term: the defining	title: the exact value of the term being defined
<am></am>	instance of a term	title: the exact value of the term being defined
<dl></dl>	definition list: an association list consisting of zero or more name-value groups (a descrip- tion list). Each group must consist of one or more names (dt elements) followed by one or more values (dd elements)	global attributes**
<dt></dt>	definition term: the term, or name, part of a term- description group in a descrip- tion list (dl element), and the talker, or speaker, part of a talker-discourse pair in a conversation (dialog element)	global attributes**
<em></em>	emphasized text: represents stress emphasis of its contents.	global attributes**
<embed/>	embed element: an external (typically non-HTML) applica- tion or interactive content	src: URL of the resource being embedded type: gives the MIME type of the plugin to instantiate height: height of the embedded content in pixels width: width of the embedded content in pixels
<fieldset></fieldset>	fieldset element: a set of form controls grouped under a common name	disabled: controls whether all the form control descendants are disabled [disabled] form: used to explicitly associate the fieldset element with its form owner name: gives the name of the form control
<figure></figure>	figure element: some flow content, optionally with a caption, that is self-contained and is typically referenced as a single unit from the main flow of the document	global attributes**
<footer></footer>	<b>footer element</b> : represents a footer for the section it applies to	global attributes**
<form></form>	form element: represents a collection of form-associated elements, some of which can represent editable values that can be submitted to a server for processing	accept-charset: gives the character encodings that are to be used for the submission action: URL that specifies a form processing agent autocomplete: determines if form elements will have their autocomplete turned on or off by default [on   off] enctype: specifies the content type used to submit the form to the server [application/x-www-form-urlencoded   multipart/form-data   text/plain] method: which HTTP method will be used to submit the forms data [get   post   put   delete] name: elements name novalidate: indicate whether the form is to be validated during submission [novalidate] target: gives the target when the form is submitted [_blank   _parent   _self   _top
<h1> to <h6></h6></h1>	headers (1-6): represent headings for their sections. elements have a rank given by the number in their name	global attributes**
<head></head>	head element: contains information about the document	none
<header></header>	header element: represents a group of introductory or navigational aids	global attributes**
<hgroup></hgroup>	heading group: used to group a set of h1-h6 elements when the heading has multiple levels, such as subheadings, alternative titles, or taglines	global attributes**
<hr/>	horizontal rule: creates a horizontal rule (line)	global attributes**
<html></html>	html document: root of an HTML document.	manifest: a URL to the address of the document's application cache manifest
<i>&gt;</i>	italic text: indicates the text is to be rendered with emphasis	global attributes**
<iframe></iframe>	inline frame: represents a nested browsing window	src: URL of a page that the nested browsing context is to contain name: elements name sandbox: enables a set of extra restrictions on any content hosted by the iframe [allow-same-origin   allow-scripts] seamless: indicates whether the iframe element's browsing context is to be rendered in a manner that makes it appear to be part of the containing document [seamless] height: height of the frame in pixels width: width of the frame in pixels
<img/>	image: represents an image	alt: text to display if the image can not src: a URL to the image file usemap: name of the map to use for the image ismap: provides access to a server-side image map height: height of the image in pixels width: width of the image in pixels

Tag	Info	Attributes
<input/>	input field: a typed data field, usually with a form control to allow the user to edit the data	Attributes are dependant upon input type accept: specified to provide user agents with a hint of what file types the server will be able to accept alt: provides the textual label for the alternative button for users and user agents who cannot use the image autocomplete: determines if the data is considered sensitive and if autocomplete will be used [on   off   default] autofocus: determines if the input will get focus when a page loads [autofocus] checked: determines if the input will be checked by default [checked] disabled: prevents the input from being pressed [disabled: prevents the input from being pressed [disabled: prevents the input from being pressed [disabled: prevents the input from being pressed [disabled] form: used to explicitly associate the button element with its form owner formaction: URL that specifies a form processing agent formenctype: specifies the content type used to submit the form be server [application/x-www-form-urlencoded   multipart/form-data   text/plain] formmethod: which HTTP method will be used to submit the forms data [get   post   put   delete] formnovalidate: indicate whether the form is to be validated during submission [formnovalidate] formnovalidate; gives the target when the form is to be validated during submission [formnovalidate] formstarget: gives the target when the form is to be validated by a control of the input in pixels list: used to identify an element that lists predefined options suggested to the user max and max: indicate the allowed range of values for the element maxlength: controls the maxlength of the input to a control multiple: indicates whether the user is to be allowed to specify more than one value [multiple] name: elements name pattern: specifies a regular expression against which the control's value is to be checked placeholder: a short hint intended to aid the user with data entry readonly! required: determines if the input is required before the form submits [required] size: gives the number of characters that, in a visual rendering, the user
<ins></ins>	inserted text: an addition to the document	cite: a URL used to specify the address of a docu- ment that explains the change datetime: used to specify the time and date of the change
<kbd></kbd>	keyboard text: user input (typically keyboard input, al- though it may also be used to represent other input, such as voice commands)	global attributes**
<label></label>	label: caption in a user interface	for: specified to indicate a form control with which the caption is to be associated
<legend></legend>	<b>fieldset title</b> : sets the title of a fieldset element	global attributes**
<li><li>&lt;</li></li>	<b>list item</b> : represents a list item of an Ordered (OL) or Unordered list (UL)	value: used in an Ordered List (OL) to set the display value
<li>k&gt;</li>	resource link: allows authors to link their document to other resources	href: destination resource of the hyperlink rel: relationship between the document containing the hyperlink and the destination resource [alternate   archives   author   bookmark   contact   external   feed   first   help   icon   index   last   license   next   nofollow   noreferrer   pingback   prefetch   prev   search   stylesheet   sidebar   tag   up] media: describes for which media the target document was designed hreflang: gives the language of the linked resource type: gives the MIME type of the linked resource sizes: gives the sizes of icons for visual media.
<mark></mark>	marked text: a run of text in one document marked or high- lighted for reference purposes, due to its relevance in another context.	global attributes**
<map></map>	image map: in conjunction with any area element descendants, defines an image map	<b>name</b> : gives the map a name so that it can be referenced
<menu></menu>	menu list: a list of commands	label: sets a visible label for the menu

## **HTML 5 - extended**

Tag	Info	Attributes
<meta/>	meta information: sets meta	charset: specifies the character encoding used by
	information for the page (like title, description)	the document content: sets the value of the document metadata http-equiv: sets a pragma directive [content- language   content-type   default-style   refresh] name: set the name of the meta information
<meter></meter>	meter element: scalar meas- urement within a known range, or a fractional value	high: specifies the range that is considered to be the "high" part low: specifies the range that is considered to be the "low" part min: specifies the lower boundary max: specifies the upper boundary optimum: specifies the range that is considered to be the "optimum" part value: current location within the range
<nav></nav>	navigation element: section of a page that links to other pages or to parts within the page: a section with navigation links	global attributes**
<noscript></noscript>	<b>noscript section</b> : represents nothing if scripting is enabled, and represents its children if scripting is disabled	global attributes**
<object></object>	embedded object: an external resource, which, depending on the type of the resource, will either be treated as an image, as a nested browsing context, or as an external resource to be processed by a plugin	data: specifies the address of the resource name: valid browsing context name usemap: name of the map to use for the image form: form to associate the object with type: gives the MIME type of the plugin to instantiate height: height of the embedded content in pixels width: width of the embedded content in pixels
<0l>	ordered list: list of items, where the items have been intentionally ordered	<b>start</b> : the ordinal value of the first list item <b>reversed</b> : indicates that the list is a descending list [reversed]
<optgroup></optgroup>	option group: a group of option elements with a common label	disabled: disables all options in the group [disabled] label: gives the name of the group, as shown to the user
<option></option>	option element: an option in a select element or as part of a list of suggestions in a datalist element	disabled: prevent any clicks on an option item [disabled] label: provides a label for element selected: determines if the option is selected by default [selected] value: provides a value for element
<output></output>	output element: the result of a calculation	form: used to explicitly associate the output element with its form owner for: allows an explicit relationship to be made between the result of a calculation and the elements that represent the values that went into the calculation or that influenced the calculation
	paragraph: creates a paragraph	global attributes**
<pre><param/></pre>	parameter element: defines parameters for plugins invoked by object elements. It does not represent anything on its own	<b>name</b> : gives the name of the parameter. <b>value</b> : gives the value of the parameter.
<pre></pre>	<b>preformatted text</b> : represents a block of preformatted text	global attributes**
<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>	<b>progress element</b> : represents the completion progress of a task.	max: specifies how much work the task requires in total value: specifies how much of the task has been completed
<q></q>	short quotation: phrasing content quoted from another source	<b>cite</b> : a URL of a page where the quote was taken from
<ruby></ruby>	ruby annotations: allows one or more spans of phrasing content to be marked with ruby annotations	global attributes**
<rp></rp>	ruby text parentheses: can be used to provide parentheses around a ruby text component of a ruby annotation	global attributes**
<rt></rt>	ruby text component: marks the ruby text component of a ruby annotation	global attributes**
<samp></samp>	<b>sample</b> : sample output from a program or computing system.	global attributes**
<script></td><td>script element: allows authors to include dynamic script and data blocks in their documents</td><td>async: the script will be executed asynchronously, as soon as it is available [async] type: gives the MIME type of the script or format of the data defer: the script is executed when the page has finished parsing [defer] src: gives the address of the external script resource to use charset: specifies the character encoding of the external script resource</td></tr><tr><td><section></td><td>section element: represents a generic document or application section</td><td><b>cite</b>: a URL of a page where the section was taken from</td></tr></tbody></table></script>		

Tag	Info	Attributes
<select></select>	selectable list: a control for selecting amongst a set of options	autofocus: determines if the controls gets focus when the page loads [autofocus] disabled: prevent the selection of an item [disabled] form: form to associate the select with multiple: allows the selection of multiple items [multiple] size: gives the number of options to show to the user
<small></small>	small text: small print or other side comments	global attributes**
<source/>	<b>source element</b> : allows authors to specify multiple media resources for media elements.	media: gives the intended media type of the media resource src: URL of the media resource type: gives the MIME type of the source
<span></span>	span: used for an inline element	global attributes**
<strong></strong>	<b>strong</b> : represents strong importance for its contents	global attributes**
<style></td><td><b>style definition</b>: allows authors to embed style information in their documents</td><td>media: says which media the styles apply to type: gives the MIME type (default: text/css) scoped: indicates that the styles are intended just for the subtree rooted at the style element's parent element [scoped]</td></tr><tr><td><sub></td><td>subscript: subscript text</td><td>global attributes**</td></tr><tr><td><sup></td><td>superscript: superscript text</td><td>global attributes**</td></tr><tr><td></td><td>table element: represents data with more than one dimension, in the form of a table</td><td>global attributes**</td></tr><tr><td></td><td>table body: represents a block of rows that consist of a body of data for a table</td><td>global attributes**</td></tr><tr><td>></td><td>table cell: represents a data cell in a table</td><td>colspan: sets how many columns a cell will span rowspan: sets how many rows a cell will span headers: space separated list of ids corresponding to the th ids and give header information for the cell</td></tr><tr><td><textarea></td><td>text area: a multiline plain text edit control for the element's raw value</td><td>autofocus: determines if the textarea gets focus when the page loads [autofocus] cols: specifies the expected maximum number of characters per line disabled: prevents entry of text [disabled] form: form to associate the textarea with readonly: control whether the text can be edited by the user or not [readonly] required: will be required to enter a value before submitting the form [required] rows: specifies the number of lines to show maxlength: controls the maximum amount of characters which can be entered placeholder: a hint intended to aid the user with data entry wrap: defines how text is wrapped [soft   hard]</td></tr><tr><td><tfoot></td><td>table footer: the block of rows that consist of the column summaries (footers) for a table</td><td>global attributes**</td></tr><tr><td>></td><td>table header: represents a header cell in a table</td><td>colspan: determines how many columns a cell will span rowspan: determines how many rows a cell will span headers: space separated list of ids corresponding to the th ids and give header information for the cell scope: determines where the cell provides its header information [col   colgroup   row   rowgroup]</td></tr><tr><td><thead></td><td>table header: the block of rows that consist of the column labels (headers) for a table</td><td>global attributes**</td></tr><tr><td><time></td><td>date/time: a precise date and/ or a time in the Gregorian calendar</td><td>datetime: date/time using the Gregorian calendar</td></tr><tr><td><title></td><td>title element: sets the title of the document</td><td>none</td></tr><tr><td></td><td>table row: a row of cells in a table</td><td>global attributes**</td></tr><tr><td><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><li><ul><l</td><td>unordered
